Required measurements and information

This form will help you gather the measurements necessary to build a driveshaft for your application.

IMPORTANT NOTES:

Always measure driveshaft length with vehicle suspension at ride height.

We measure everything in inches.

When measuring anything under 6 inches, use a 6-inch scale or calipers, avoid using a tape measure.

Measurement Guide:

NOTE: Maximum Overall Length for 5" Shaft is 78.0". WHY? Click [HERE](#) to find out.

Enter dimensions in fields:

Dimensions are measured in inches and can be entered as decimals (eg. 0.75 or 20.125)

A: Length shaft extends from housing

Enter a number between 0.000 and 10.000

Valid range (0.000" to 10.000")

B: Overall Length

Enter a length between 8.000 and 78.000

Valid range for 5" shafts (8.000" to 78.000")

Shaft dimensions are entered in these fields.

Aluminum Driveshafts

Aluminum driveshafts are built with Alcoa drawn seamless tubes.

6061-T6 forged aluminum weld yokes.

Available in 3.00", 3.50", 4.00" and 5.00" x .120" wall tubing sizes.

These shafts are built with choice of 1310, 1330, 1350, 1410 or 1480 series, Spicer Life Series U-joints for high strength and long life.

All Aluminum Driveshafts are precision high speed balanced on our Hines DL-500 driveline balancer.
